PROJECTS

E-COMMERCE DASHBOARD

- The E-commerce Dashboard is a web-based application with a user-friendly interface.
- The application offers functionalities such as add, search, update, delete, sort, and filter products.
- React is used for front-end development, while Express is used for the back-end.
- MongoDB is used for data storage, ensuring a reliable and responsive application.
- TechStack: ReactJs, MongoDB, ExpressJs.

E-COMMERCE WEBSITE

- The e-commerce website project is a comprehensive online shopping platform with modular functionalities.
- The modular functionalities include an intuitive interface, secure payment system, well-categorized product catalog.
- The website is designed to provide users with a seamless and responsive shopping experience.
- React is used for front-end development, while express is used for backend.
- MongoDB is used for data storage.
- TechStack: ReactJs, MongoDB, ExpressJs.

CAREER BUDDY SYSTEM

- Career Guidance System is a web application built using a robust tech stack.
- Angular is used for the frontend, SQL Server for data storage, and SpringBoot for the backend.
- The application provides personalized career guidance and job recommendations based on user interests, skills, and experience.
- It was a group effort, and I was responsible for helping with the front end, which included html, css, and js.
- TechStack: Angular, SpringBoot, SqlServer.
